

Alex Rozas

Associate

rozas.alex@dorsey.com

Denver – 303.352.1125

Alex is a professional mechanical engineer turned patent attorney who understands client needs—and has prosecuted over 150 patent applications for mechanical, electronic, and software inventions.

Alex is experienced in drafting applications, responding to office actions, and advising clients on IP strategy to protect billion-dollar product lines. He is skilled at identifying and communicating the key facets of critical decisions in any patent application to a client/inventor, across all levels of client patent sophistication. Alex combines this with technical expertise and client business insight to give his clients the tools to make insightful decisions, ultimately delivering efficient, business-focused solutions. He can translate complex inventions into prosecutable, business-aligned claims. Alex excels at identifying Examiner misalignment on immediate or underlying issues and leveraging Examiner Interviews to reconcile the misalignment and drive allowance. With further experience in both patent litigation and trademark prosecution, Alex is able to provide strategic guidance across the full patent portfolio lifecycle and intellectual property spectrum.
