

Partner Evan Everist Comments on U.S. Copyright Office's Warning About Digital Replicas

by Evan Everist

The U.S. Copyright Office recently published a [report](#) on the legal issues at the intersection of copyright and artificial intelligence technologies. The report addressed the apparent need for policies that protect individuals and their personal privacy from deepfakes and voice clones, collectively referred to as digital replicas. The Copyright Office proposed a law that would provide such protections at a federal level.

Evan commented that “the proposal is significant because, if followed by Congress, it would establish a version of federal publicity rights that to this point have existed primarily at the state level.”
